Abstract of the Disclosure

A system and method for converting a page from a network into an image file suitable for assembly of or insertion into a document generated by a document

5   creation algorithm. The system of the invention includes a browser for retrieving a page from the network. The page can be encoded as a page description language (PDL) file representative of the page. A production agent can be provided for translating the PDL file into an image file representative of the page. The image file is of a form and type suitable for assembly or incorporation into the document.
